

VETERINARY BOARDING

We are happy to provide our clients with boarding services. We have friendly, animal loving staff that will take great care of them while you are away. We provide bedding and bowls. Please call us with any questions or concerns you may have about boarding your pet. We want your pet to be as comfortable as possible while they are with us.

We require a reservation for your pet's stay with us. Our boarding facility books up very quickly, especially for major holidays. We also ask that you give us at least a 24-hour notice of cancellation.

WHAT TO BRING

Belongings: Every pet boarding has their own cubby for their belongings. We encourage you to bring a toy, food and treats that your pet likes. In addition, any medication they are currently receiving. Please label your pet's belongings. Unfortunately, we cannot accommodate everyone's personal bedding, blankets, or bowls as we have various types of our own that we have for your pet to use while here. Please leave these items safe at home.

Food and Treats: Please bring only enough food and treats that your pet will need for their stay. We appreciate if their food is premeasured and labeled with instructions. If you don't bring food for your pet, we will gladly serve them Royal Canin Gastrointestinal Dry Diet, Chicken and Rice flavor.

Medication: Make sure you bring any medication that your pet needs. We advise that medications are kept in original containers, so we can identify what your pet is currently taking in the event we need to address any questions or concerns that staff may have while your pet is boarding with us.

VACCINES

Vaccinations required to board your pet.

Dogs:

Rabies Vaccine (1 yr. or 3 yr.)
DHPPv (Distemper, Hepatitis, Parvo, Parainfluenza)
Bordetella (1 yr)

Cats:

Rabies (1 yr)
FVRCP (1 yr)

Please note: If absolutely necessary, if your pet needs any vaccinations updated, we can update what is needed at our clinic however an exam will also be performed and charged.

Disclaimer: Because we are a veterinary hospital, there is a minor risk of infectious disease
